# Chaitanya Bharathi Institute of Technology Gandipet, Hyderabad -500075.

ISO 9001:2008 REC-403

## LESSON PLAN

Department: Information Technology Class: B.E. III Sem (CBCS) (H2 Section)

Academic Year: 2017-2018 Subject Code: 16ITC02

Subject: **Data Structures and Algorithms**No. of Periods: **3 hours/week** + **1 Tutorial**Commencement of Instruction: **28.06.2017**Completion of Instructions: **21.10.2017** 

Date of I-Mid Exam: **21.08.2017** Date of II-Mid Exam: **19.10.2017** 

Faculty: Ms T Prathima Total no. of classes: 44

#### **Time Table of the Course:**

| Day  | Monday              | Wednesday            | Thursday            | Friday               |
|------|---------------------|----------------------|---------------------|----------------------|
| Time | 1:20 to 2:20 PM (1) | 11.40 to 12.40 PM(1) | 9.40 to 10.40 AM(1) | 11.40 to 12.40 PM(1) |

No. of Public Holiday during I semester in 2017-18:

| V 8      |         |            |            |            |               |             |
|----------|---------|------------|------------|------------|---------------|-------------|
| Day      | Mo      | onday      | Wednesday  |            | Thursday      | Friday      |
| Occasion | Bonalu  | 10.07.2017 | Bathukamma | 20.09.2017 | Durgashtami - | Ganesh      |
| & Date   |         |            |            |            | 28.09.2017    | Chathurdi - |
|          | Krishna | 14.08.2017 | Deepavali  | 18.10.2017 |               | 25.08.2017  |
|          | ashtami |            |            |            |               |             |
|          | Gandhi  | 02.10.2017 |            |            |               |             |
|          | Jayanti |            |            |            |               |             |

**Mode of Teaching:** Whiteboard, Power point presentations, Assignments

### **Course Objectives:**

- 1. To develop proficiency in the specification, representation of various linear and nonlinear data structures.
- 2. To discuss applications of data structures.
- 3. To familiarize with various pattern matching algorithms and hashing.
- 4. To develop a base for advanced computer science study.

#### **Course Outcomes:**

Upon successful completion of this course, student will be able to

- 1. Learn the role of basic data structures arrays and linked lists.
- 2. Analyse time complexity of both iterative and recursive functions.
- 3. Define ADT necessary for solving problems based on Stacks and Queues.
- 4. Develop solutions using binary trees, advanced search trees, tries and graphs.
- 5. Understand hash functions and handle collisions.
- 6. Understand various kinds of sorting techniques and apply appropriate techniques for solving a given problem.

#### **Prerequisites:**

Programming and Problem Solving (16CSC01), Programming Laboratory (16CSC02)

# Course Plan/schedule

| S.No. | Topics / Sub. Topics /Experiments                                                                                                                                                                                                        | No. of<br>Classes<br>Estimated | Remarks |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|---------|
|       | UNIT – I                                                                                                                                                                                                                                 |                                |         |
| 1.    | Using Arrays, Storing Game Entries in an Array, Sorting an Array, Two-Dimensional Arrays.                                                                                                                                                | 01                             |         |
| 2.    | Singly Linked Lists, Implementing a Singly Linked List,<br>Insertion to the front of a Singly Linked List, Removal from<br>the front of a Singly Linked List, Implementing a Generic<br>Singly Linked List.                              | 02                             |         |
| 3.    | Doubly Linked Lists, Insertion into a Doubly Linked List,<br>Removal from a Doubly Linked List, Circularly Linked Lists,<br>Reversing a Linked List.                                                                                     | 02                             |         |
| 4.    | Recursion, Linear Recursion, Binary Recursion, Multiple Recursion, Analysis of Algorithms.                                                                                                                                               | 02                             |         |
|       | UNIT – II                                                                                                                                                                                                                                |                                |         |
| 5.    | Stacks, The Stack Abstract Data Type, The STL Stack, A C++ Stack Interface, A Simple Array-Based Stack Implementation, Implementing a Stack with a Generic Linked List.                                                                  | 02                             |         |
| 6.    | Reversing a Vector Using a Stack, Matching Parentheses and HTML Tags, Queues, The Queue Abstract Data Type.                                                                                                                              | 01                             |         |
| 7.    | The STL Queue, A C++ Queue Interface, A Simple Array-Based Implementation, Implementing a Queue with a Circularly Linked List.                                                                                                           | 02                             |         |
| 8.    | Double-Ended Queues, The Deque Abstract Data Type, The STL Deque, Implementing a Deque with a Doubly Linked List.                                                                                                                        | 02                             |         |
| 9.    | Lists, Node-Based Operations and Iterators, The List Abstract Data Type, STL Lists, STL Containers and Iterators.                                                                                                                        | 01                             |         |
|       | UNIT – III                                                                                                                                                                                                                               |                                |         |
| 10.   | General Trees, Tree Definitions and Properties, Tree Functions, A C++ Tree Interface, A Linked Structure for General Trees, Tree Traversal Algorithms, Depth and Height, Preorder Traversal, Postorder Traversal, Binary Trees.          | 02                             |         |
| 11.   | The Binary Tree ADT, A C++ Binary Tree Interface, Properties of Binary Trees, A Linked Structure for Binary Trees, A Vector-Based Structure for Binary Trees, Traversals of a Binary Tree, Representing General Trees with Binary Trees. | 01                             |         |
| 12.   | Pattern Matching Algorithms, Brute Force, The Boyer-Moore Algorithm, The Knuth-Morris-Pratt Algorithm.                                                                                                                                   | 02                             |         |
| 13.   | Tries, Standard Tries, Compressed Tries, Suffix Tries.                                                                                                                                                                                   | 02                             |         |
| 14.   | Merge-Sort, Divide-and-Conquer, Merging Arrays and Lists,<br>The Running Time of Merge-Sort, Merge-Sort and Recurrence<br>Equations, Quick-Sort, Randomized Quick-Sort.                                                                  | 02                             |         |
| 15.   | Studying Sorting through an Algorithmic Lens, A Lower<br>Bound for Sorting, Linear-Time Sorting: Bucket-Sort and<br>Radix-Sort, Comparing Sorting Algorithms.                                                                            | 02                             |         |

|     | UNIT – IV                                                                                                                                                                              |    |  |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|--|
| 16. | Binary Search Trees, Searching, Update Operations, C++ Implementation of a Binary Search Tree, AVL Trees, Update Operations,                                                           | 02 |  |
| 17. | Splay Trees, Splaying, When to Splay, Amortized Analysis of Splaying, Tree, Multi-Way Search Trees, Update Operations for (2,4) Tree, Red-Black Trees, Update Operations.              | 02 |  |
| 18. | The Priority Queue Abstract Data Type, Keys, Priorities, and Total Order Relations, Comparators, The Priority Queue ADT, A C++ Priority Queue Interface, Sorting with a Priority Queue | 02 |  |
| 19. | The STL priority queue Class, Implementing a Priority Queue with a List, Selection-Sort and Insertion-Sort, Heaps, The Heap Data Structure.                                            | 02 |  |
| 20. | Complete Binary Trees and Their Representation,<br>Implementing a Priority Queue with a Heap, Bottom-Up Heap<br>Construction.                                                          | 02 |  |
|     | UNIT – V                                                                                                                                                                               |    |  |
| 21. | Hash Tables, Bucket Arrays, Hash Functions, Hash Codes,<br>Compression functions, Collision-Handling Schemes, Load<br>Factors and Rehashing.                                           | 02 |  |
| 22. | Graphs, The Graph ADT, Data Structures for Graphs, The Edge List Structure, The Adjacency List Structure, The Adjacency Matrix Structure, Graph Traversals, Depth-First Search.        | 02 |  |
| 23. | Implementing Depth-First Search, Breadth-First Search, Directed Graphs, Traversing a Digraph, Transitive Closure, Directed Acyclic Graphs, Shortest Paths, Weighted Graphs             | 02 |  |
| 24. | Dijkstra's Algorithm, Minimum Spanning Trees, Kruskal's Algorithm, The Prim-Jarn'ık Algorithm.                                                                                         | 02 |  |

## General timings for consultation:

- Friday SFI hour (-03.20pm to 04.20pm)
- Saturday 09.40am to 12.40pm

## **Attendance Policy:**

- 75% attendance is must
- It is the responsibility of the student to be regular and punctual to classes

## Activity student has to do to achieve the objectives of the course:

- Students should attempt to write the programs on their own and execute them in laboratory.
- Students should discuss the issues/errors/difficulties faced while solving the problems.
- Assignments should be submitted in time.

#### **Notices:**

• All notices will be sent to the class group and displayed on 2/4 Notice Board.

#### **Instructor's Contact details:**

### **LESSON PLAN**

Department: Information Technology

Academic Year: 2017-2018

Class: B.E. 2/4, I-Sem (H2)

Subject Code: 16ITC05

Subject: **Data Structures and Algorithms Lab**No. of Periods: 42

Commencement of Instruction: **28.06.2017** Completion of Instructions: **21.10.2017** 

Faculty: Ms T. Prathima Total no. of classes:42

| Batch    | Date of I-Mid Exam: | Date of II-Mid Exam: |  |
|----------|---------------------|----------------------|--|
| Batch #1 | 29.08.2017          | 10.10.2017           |  |
| Batch #2 | 31.08.2017          | 12.10.2017           |  |
| Batch #3 | 01.09.2017          | 13.10.2017           |  |

#### **Time Table of the Course:**

| Day  | Tuesday (B1)      | Thursday (B2)      | Friday (B3)        |
|------|-------------------|--------------------|--------------------|
| Time | 9.40am to 12.40pm | 01.20pm to 04.20pm | 01.20pm to 04.20pm |

No. of Public Holidays during I Semester in 2017-18:

| Day      | Tuesday      | Thursday      | Friday      |
|----------|--------------|---------------|-------------|
| Occasion | Independence | Durgashtami - | Ganesh      |
| & Date   | Day -        | 28.09.2017    | Chathurdi - |
|          | 15.08.2017   |               | 25.08.2017  |

## **Course Objectives:**

- 1. To introduce basic data structures and algorithms.
- 2. To introduce Non-linear data structures.
- 3. To familiarise students with graph operations and algorithms.
- 4. To familiarise students with advanced tree structures like AVL and Tries.

### **Course Outcomes:**

Student will be able to

- 1. Implement various data structures using arrays, linked lists
- 2. Develop ADT necessary for solving problems based on Stacks and Queues.
- 3. Implement binary trees, general tree structures, advanced search trees, heaps, graphs.
- 4. Implement tries.
- 5. Implement hash functions and handle collisions.
- 6. Implement various kinds of sorting techniques and apply appropriate techniques for solving a given problem.

## **Prerequisites:**

Programming and Problem Solving (16CSC01), Programming Laboratory (16CSC02)

## **Course Plan/Schedule**

| S.No. | Topics / Sub. Topics /Experiments                                         | No. of Classes |
|-------|---------------------------------------------------------------------------|----------------|
| 1.    | Define Single Linked List ADT and implement its operations.               | 3              |
| 2.    | Define Double Linked List ADT and implement its operations.               | 3              |
| 3.    | Implement Stack ADT and perform Infix to Postfix Conversion.              | 3              |
| 4.    | Perform evaluation of postfix expression using Stack ADT.                 | 3              |
| 5.    | Implement Queues, Circular Queues and Deques.                             | 3              |
| 6.    | Define String ADT and implement Boyer Moore pattern matching              | 3              |
|       | algorithm.                                                                |                |
| 7.    | Implement Tries.                                                          | 3              |
| 8.    | Implement the following: Insertion Sort, Bubble Sort, Selection Sort, and | 3              |
|       | Shell Sort.                                                               |                |
| 9.    | Implement the following: Merge Sort, Quick Sort, Heap Sort, and Binary    | 3              |
|       | Search.                                                                   |                |
| 10.   | Construct a Binary Search Tree and implement Tree Traversals.             | 3              |
| 11.   | Implement AVL Tree.                                                       | 3              |
| 12.   | Implement Hashing with chaining.                                          | 3              |
| 13.   | Implement BFS Traversal on Graph.                                         | 3              |
| 14.   | Implement DFS Traversal on Graph.                                         | 3              |

#### **Evaluation scheme:**

| EC | Evaluation  | Nature of   | Duration | Weightage | Date           | Venue      |
|----|-------------|-------------|----------|-----------|----------------|------------|
| N0 | Components  | Component   |          |           |                |            |
| 1  | Test – I    | Closed Book | 3 hours  | 17 %      | 29.08.2017(B1) | Respective |
|    |             |             |          |           | 31.08.2017(B2) | labs       |
|    |             |             |          |           | 01.09.2017(B3) |            |
| 2  | Test – 2    | Closed Book | 3 hours  | 17 %      | 10.10.2017(B1) | Respective |
|    |             |             |          |           | 12.10.2017(B2) | labs       |
|    |             |             |          |           | 13.10.2017(B3) |            |
| 3  | Final Exams | Closed Book | 3 hours  | 66%       | Will be        | Will be    |
|    |             |             |          |           | announced      | announced  |

## **General timings for consultation:**

- Within Lab hours
- Friday SFI hour (-03.20pm to 04.20pm)
- Saturday 09.40am to 12.40pm

## **Attendance Policy:**

- 75% attendance is must
- It is the responsibility of the student to be regular and punctual to the Lab sessions

## Activity student has to do to achieve the objectives of the course:

- Students should attempt to write the programs on their own and execute them in laboratory.
- Students should discuss the issues/errors/difficulties faced while solving the problems.
- Assignments should be submitted in time.

#### **Notices:**

• All notices will be sent to the class group and displayed on 2/4 Notice Board.
